

# BELT PRESS

## ENOITALIA GROUP

Enoitalia è un'azienda italiana fondata nel 1962, specializzata nella progettazione e produzione di macchine per l'industria enologica.

Presente in oltre 45 paesi in tutto il mondo con 500000 articoli venduti, Enoitalia offre ai suoi clienti prodotti innovativi, assistenza tecnica continua e condizioni di mercato competitive.

Dal 2007 abbiamo creato due nuove divisioni:

Enobeer, per progettazione e produzione di impianti per produzione di birra; Enotoscana, per la produzione di serbatoi in acciaio inox.

La nostra qualità made in Italy unita ad un team giovane e dinamico, ci ha permesso di espanderci ancora di più, creando una realtà basata su stabilità e innovazione.

Enoitalia is an Italian company founded in 1962, specialized in design and production of machines for the oenological industry.

Present in over 45 countries around the world, with more than 500000 items sold, Enoitalia offers to its customers innovative products, continuous technical assistance and competitive business conditions.

Since 2007 we've created new divisions: Enobeer, specialized in design and production of brewery;

Enotoscana, for production of inox tanks.

Our quality made in Italy joined with a young and dynamic team, has enabled us to increase even more, creating a reality based on stability and innovation.

Supply voltage	V	3/N/PE ~ 400 V 50Hz

BELT PRESS 1200 has a belt with 60 cm width.

The obtained juice flows into integrated collection tank under the press. Then the pump transfers the juice from the press to a desired tank for further processing. The pressing process is continuous.

- The most evolutionary feature of our Belt press POWERPRESS line is that belt presses come with integrated pump and juice collection tank. This means you save money and do not need additional juice collection tank and pump which otherwise would use much space and cause additional costs.

- The juice yield of apples using our belt press is ~75 %.

- There is a filtration sieve integrated into the juice collection tank. It filtrates the juice providing clearer and purer product.

- The belt presses work automatically: when the mash inlet tank is full, all other machines, which come before belt press, turn off automatically. When the juice tank is full, the pump automatically pumps the juice into the tanks.

- The belt press includes a high-pressure washer, which continuously washes the belt of the machine. Our belt washing system is simple, does not contain any engines or reducers, so it prolongs the use time and saves the service costs.

- Machine has an openable pneumatic cover which makes the washing process of the machine easier.

- After work, belt press should be manually washed with a water stream. A full washing process takes around 15-20 minutes. Washing is simple and all the parts of the belt press are easily removable without any tools.

- Belt tension is adjustable.

- Machine is made entirely of stainless steel and has adjustable feet.

- Easy to clean with no closed or inaccessible spaces, all parts are easy to assemble.
